1. Introduction

The Marshall VSC-100 AV Consolidator Bridge is a professional integration tool for effortlessly combining HDMI video with high-fidelity audio input for use with modern PC-based systems.

A single USB connection is all that is required for UCC applications, conferencing, video production, and recording. UVC protocol support allows the application to control video format, frame rate, and other settings independent of the original source format. In addition, HDMI audio can be extracted and routed to headphones or amplified speakers.

Select either one of two HDMI video sources with the push of a button. Active loop-through outputs keep sources available for other purposes such as feeding monitors, recorders, etc. External audio may be routed to the USB output or both the USB and HDMI outputs.

The VSC-100 becomes fully functional within seconds after it is powered.

2. Features

- (2) HDMI 2.0 Inputs with active loop-through dual output
- Independent audio gain controls for dual audio input sources
- USB 3.0 computer interface with UVC control and scaling
- Plug-and-Play. Driver installation not required for most applications
- Compatible with popular applications such as: Zoom, Skype, OBS Studio and many more.

3. Package Contents

- (1) VSC-100 Unit
- (1) USB 3.0 Type A-to-B Cable
- (1) 12-volt universal power supply (120 – 240volts, 50/60 Hz)

4. System Requirements

- Host computer with recent operating system, preferably Windows 10 or Mac OS X
- Available USB 3.0 port (supports up to 1080p60 to host computer) or,
- Available USB 2.0 port (supports up to 720p60 to host computer)

5. Front Panel Features

- 1. Power Indicator LED
- 2. HDMI Input Selector
- 3. Audio Gain Controls
- 4. USB 3.0 Output for Computer
- 5. USB 2.0 Convenience Pass-Through

6. Rear Panel Features

- 6. Power Input Jack
- 7. RS-232 Firmware Update Port
- 8. HDMI Inputs and Outputs
- 9. USB 2.0 Convenience Pass-Through
- 10. Two Channel Balanced Audio Inputs
- 11. 3.4mm Stereo Line Output
- 12. Configuration DIP Switches

7. Quick Start

1. Computer should be powered and operating. Power the VSC-100 using the supplied power adapter. Connect the VSC-100 to the host computer using the USB 3.0 cable provided. The first time the unit is used, please allow about one minute for the computer to identify the unit and setup the drivers.
2. Open an application such as Zoom, Skype, OBS Studio, etc. and select the Video and Audio devices. The VSC-100 adapter will identify itself as “MEI 3.0 Capture Device”. Depending on the application used, the unit may appear in the application as a Camera or a Capture Device. It should also appear as a stereo audio device.
3. Before an HDMI input is attached, a message similar to the one shown below will appear in the application’s video preview window. (The Output format and frame rate may be different depending on the application software).

4. Connect an HDMI video source and select the appropriate front panel Select button. The computer on-screen message will change like the one below. This message will disappear after about 8 seconds.

At this point, the VSC-100 is operating and ready to use as an HDMI to USB adapter. Control of the USB 3.0 output format and frame rate depends on the capabilities of the software being used for conferencing, recording, streaming, etc.

Note: Most conferencing applications will automatically set the USB output format to 720p. This does not affect the HDMI loop through outputs, they will be the same as the selected input.

8. Operations - Rear Panel Switches

The VSC-100 can be configured for a variety of applications by setting the DIP switches located on the back panel. These switches affect how audio is routed within the unit and can select between the audio from the incoming HDMI video or external audio amplified by the built-in high-fidelity dual-channel preamplifier.

There are four switches arranged like this. They are shown in their factory default positions, all down. In this arrangement, incoming audio from the video source will be passed to the USB and analog outputs. The HDMI output audio is muted.

DIP SWITCH FUNCTIONS	DOWN	UP
Switch 1	HDMI / USB Audio from HDMI	HDMI / USB Audio from Analog In
Switch 2	Line Output from HDMI Input	Line Output from Analog In
Switch 3	HDMI Out Audio Muted	HDMI Out Audio Unmuted
Switch 4	Normal Operation	Firmware Update Mode

In this arrangement, all audio will be coming from the analog inputs. HDMI output audio is muted.

In this example, incoming HDMI audio and video will be passed out to the HDMI and USB outputs. The analog audio inputs will appear at the stereo output connector.

9. Operations - Front Panel Gain Controls

Two rotary knobs on the front panel control Gain for each analog input. These allow the VSC-100 to work with audio sources ranging from very low output microphones (-40db reference) to “line level” (-10db reference). For a given setup, these should be considered as “set and forget” controls. The volume controls provided by the computer application should be used during normal operations.

Suggested knob starting position for different source types. Adjust the Gain control until a normal level is achieved through the USB connection to the application in use. For example, Gain should be turned down for line level sources like media players and turned up for low level sources like dynamic microphones

Line Level

Electret Mic

Dynamic Mic

10. Specifications

HDMI Input and Output

- Conforms to HDMI 2.0 standard
- HDCP 1.4 and 2.2 compliant
- Supports Video Frame Rates from 23.98 to 60.00
- Supports Video Formats from 480i/p, 576i/p to 3840 x 2160 50/59/60 (4096 x 2160 signal accepted, some side cropping will occur)

USB 3.0 Output

- Up to 1080p60 with stereo audio, 16-bit @ 44.1KHz to computer (Actual video format and frame rate dependent on UVC control commands received from the host computer.)

Size and Weight

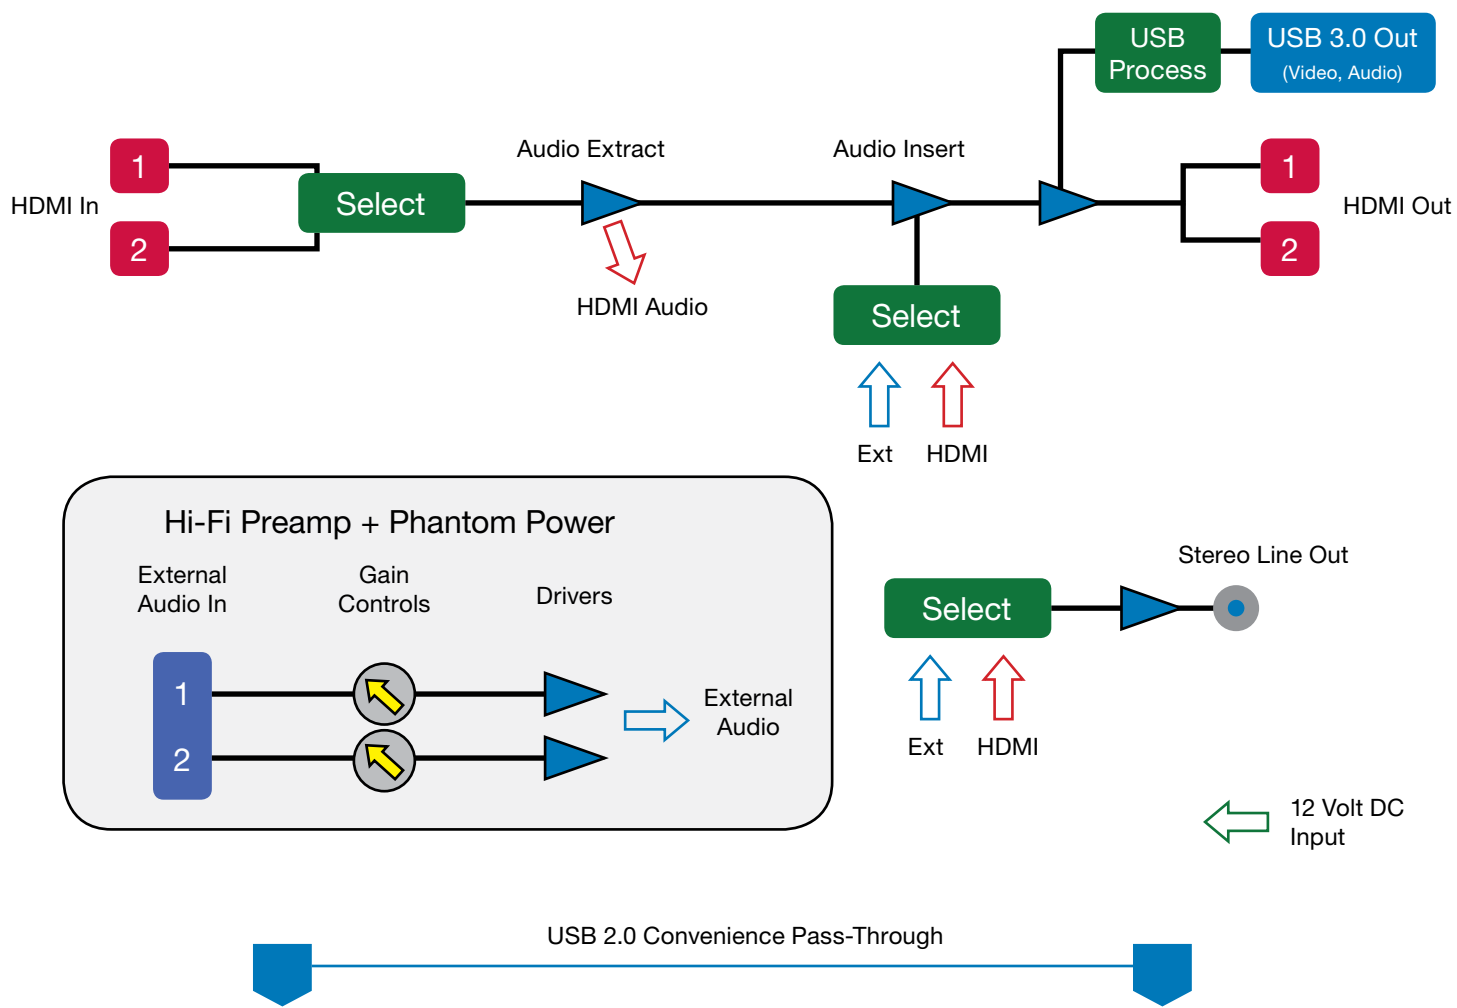

- 4 x 14 x 12 in / 101.6 x 355.6 x 304.8 mm
- 1 lbs / 0.454 Kg

Power requirements

- 12 Volts DC – Recommended to use only supplied 12v Power Adapter

12. Tips and Fixes

My computer says, “the USB device is not recognized” or “the device does not support the required parameters”.

First, be sure to use the USB cable that was supplied with the VSC-100. If it becomes lost or damaged, please replace it with a “USB 3.0 type A-to-B” cable which provides the power and bandwidth necessary for proper operation of the unit. When in doubt, try another cable.

Next, a message similar to the one above can also occur when the VSC-100 is connected to a USB 2.0 connector. This can be fixed by plugging into a USB 3.0 port on the host computer. USB 3.0 connections are usually identified by blue color inside the connector.

If only a USB 2.0 connection is available, lowering the source video format usually works. 720p is a good choice.

The video source is 1080p50 (or 60) but the computer says the incoming video is different (760p for example). Why isn’t it the same as the source?

The VSC-100 is compatible with the USB industry standard UVC control protocol. This allows the host computer to adjust the format and frame rate independently from the incoming source. Many applications have controls that allow changing these parameters. Video conferencing applications typically do not have these controls and simply force the settings that work best. Please consult the instructions that are provided with the application for more information.

The VSC-100 HDMI output is connected to a video recorder. The recorder is getting is a blank picture.

OR.....

The HDMI output is connected to a video monitor and the picture is perfect, but the picture on the computer is black with the message “Input: HDCP Content”. Can this be fixed?

HDMI video contains a “copy protection” system called HDCP “High Bandwidth Digital Content Protection”. The principle behind HDCP is that copyrighted content should be seen and heard but not recorded or transmitted. What this boils down to is that material containing an HDCP “flag” will be visible only on display devices, in other words, monitors, projectors and television sets. A common difficulty is that DVD players, Blue Ray players and set top boxes (cable and satellite) normally force HDCP on even when the material being played is not copyrighted. Video cameras, on the other hand, never use HDCP. Computer outputs may or may not use HDCP depending on the material being output. For details on HDCP, please visit www.hdmi.org.

Note: SDI inputs do not have content protection.

I'm trying to use VLC to test the VSC-100 but the picture looks wrong and the video format is incorrect as well.

To connect with VLC, follow these steps:

1. Select the MEDIA tab then select OPEN CAPTURE DEVICE
2. In the Window that appears, select MEI USB 3.0 CAPTURE DEVICE for the Video Device Name and Audio Device Name then click on ADVANCED OPTIONS.
3. In the next window, change Aspect Ratio to 16:9
4. If you are connected using USB 3.0, type YUY2 for Video Input Chroma Format.
If you are connected using USB 2.0 type MJPG for Video Input Chroma Format.
Now click OK. The window will close.
5. Click Play at the bottom of the remaining window. The incoming video and audio will appear.

Warranty

Marshall Electronics warranties to the first consumer that this device will, under normal use, be free from defects in workmanship and materials, when received in its original container, for a period of two years from the purchase date. This warranty is extended to the first consumer only, and proof of purchase is necessary to honor the warranty. If there is no proof of purchase provided with a warranty claim, Marshall Electronics reserves the right not to honor the warranty set forth above. Therefore, labor and parts may be charged to the consumer. This warranty does not apply to the product exterior or cosmetics. Misuse, abnormal handling, alterations or modifications in design or construction void this warranty. No sales personnel of the seller or any other person is authorized to make any warranties other than those described above, or to extend the duration of any warranties on behalf of Marshall Electronics, beyond the time period described above.

Due to constant effort to improve products and product features, specifications may change without notice.
